

# **Welcome to the Bitcoin Education Foundation Curriculum For Classrooms, Clubs, and Curious Minds**

## **A Note from The Bitcoin Education Foundation**

We created this curriculum because we believe financial education is a human right — and that Bitcoin represents one of the most important monetary innovations in history.

Too often, students learn how to spend money, but not how it works. We aim to change that.

This 6-module course is designed to help young people understand the history of money, explore the challenges of traditional systems, and learn how Bitcoin offers a new way forward. It's not just about digital currency — it's about critical thinking, global access, and economic freedom.

This resource is entirely free, open-source, and built for any educator — whether you're teaching in a classroom, leading a youth program, or hosting a local Bitcoin meetup.

## **How to Use This Curriculum**

This curriculum is structured into 6 modules, each containing:

- A detailed lesson overview
- A beginner-friendly blog-style article
- A printable student worksheet
- A resource page with recommended readings and videos

You can use the modules in sequence or adapt them to fit your timeline and learning goals. Each lesson is designed to stand alone, but together they build a powerful foundation of Bitcoin literacy.

## **Each module includes:**

1. Teacher Overview – Core focus and objectives
2. Lesson Plan – Key concepts, discussion prompts, and activities
3. Student Worksheet – In-class or take-home learning
4. Article & Resources – Supplemental reading and video content

## **Tips for Educators**

- Keep it grounded – Students don't need to be tech-savvy to understand Bitcoin. Focus on the big ideas: money, freedom, and access.
- Encourage questions – Bitcoin is new to many learners. Create a space where students can ask anything.
- Promote critical thinking – Emphasize not just what Bitcoin is, but why it matters and how to approach it thoughtfully.
- Use real-world connections – Each module includes global examples, current events, and stories from everyday people.

## **Final Thought**

Whether you're new to Bitcoin or have been following it for years, this curriculum is your guide to teaching it with clarity, confidence, and purpose.

We're here to help you bring Bitcoin education to life — one classroom at a time.
